

## Century Group Inc. Delivers Concrete Railroad Grade Crossings to Valero Energy

Century Group has delivered numerous custom concrete railroad grade crossings to Valero Energy's facility in southeast Texas. The custom concrete grade crossings were manufactured for spiral, compound and reverse curves in 115# railroad tracks. The project designed by Wilson & Company called for concrete crossings to be installed on roadways which have heavy haul and high vehicular traffic.

Century Group's Jerry McCombs stated, "This was a fast turnaround project and we are pleased that Century was able to meet delivery schedules and all concrete railroad grade crossings were able to be installed despite hurricanes Gustav and Ike striking the region."

Century Group Inc. is the nation's leading producers of concrete railroad grade crossings and railroad spill containment pan

systems. For more information on Century's custom concrete railroad crossings for curves, turnouts, pedestrian, direct fixation track and other custom applications, click on the link to email the Century Group Railroad Products Division or call 1-800-527-5232, Ext. 118.
